

SM001 - Scots pine trial on unprepared and prepared planting sites (Sweden, June-Oct 2025)

Detail map

 Plot location

SILVIVO trial design

- *Pinus Silvestris*, T21(low productivity site)
- 2 treatments per area (1 treatment per planting row)
- 20 seedlings per plot
- 7 plots
- Site preparation: Disturbed but unprepared ground (between rows)
- Trials are carried out by Cropcision in collaboration with Swedish University of Agricultural Sciences
- District: Västerbotten in Sweden

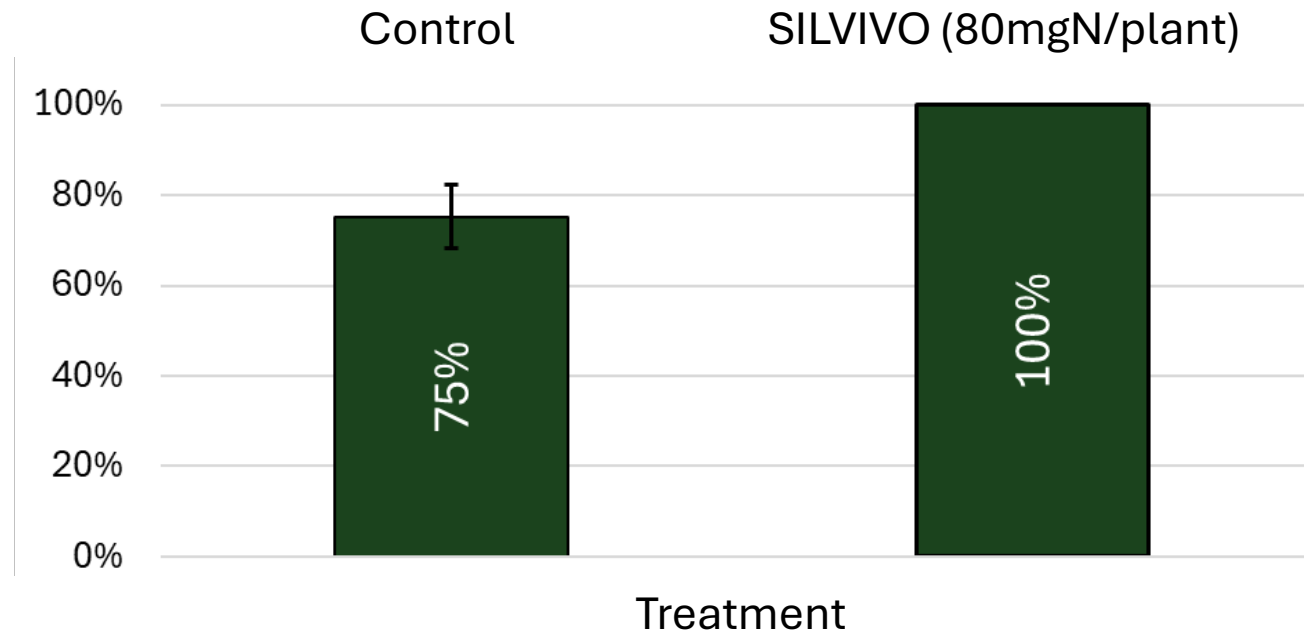

Easy treatment when planting

1. Referens (0 mgN/plant) – Control
2. SILVIVO (80mgN/plant)

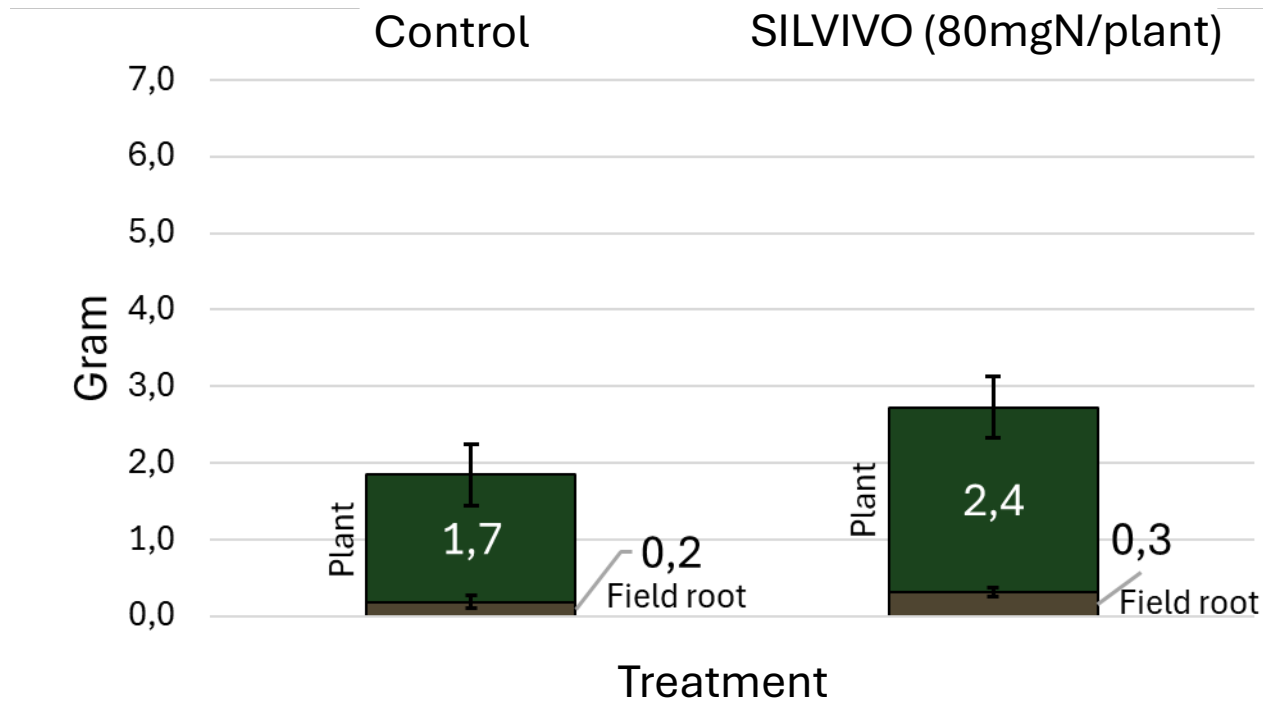

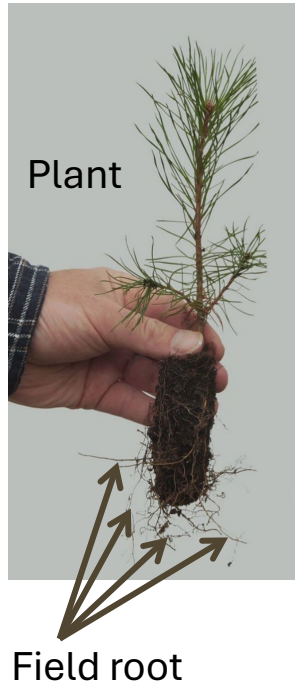

Measurements

- Survival
- Biomass: Shoots and field roots
- Stem diameter
- Root and root-associated soil microbiome (not included in this report)

Survival after 4 months on unprepared ground

Dry biomass after 4 months on unprepared ground

Stam diameter after 4 months on unprepared ground
