

SM002 - Scots pine trial on prepared and unprepared plating sites (Sweden, June-Oct 2025)

Detail map

 Trial sites

SILVIVO trial design

- *Pinus Silvestris*, T21(low productivity site)
- 2 treatments per area (1 treatment per planting row)
- 20 seedlings per plot
- 7 plots
- Site preparation: Prepared ground
- Trials are carried out by Cropcision in collaboration with Swedish University of Agricultural Sciences
- District: Västerbotten in Sweden

Easy treatment when planting

- Referens (0 mgN/plant) – Control
- SILVIVO (80mgN/plant)

Measurements

- Survival
- Biomass: Shoots and field roots
- Stem diameter
- Root and root-associated soil microbiome (not included in this report)

Survival after 4 months on prepared ground

Dry biomass after 4 months on prepared ground

Field root

CONTROLL
